

Practical – 8

Objective:-

Write the function in PHP to display String length, string reversal, and conversion to uppercase and conversion to lowercase of given string.

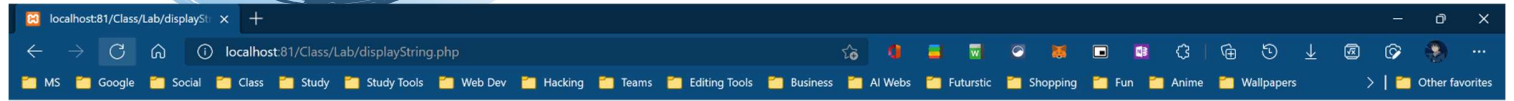

Theory:-

1. <?php...?> used to mark the beginning and the end of the block of code.
 2. echo is used to display output.
 3. \$ returns a reference to the variable.
 4.
 It inserts a line break.
 5. strtolower() is used to convert a string into lowercase.
 6. strtoupper() is used to convert a string into uppercase.
- 

Code:-

```
<?php
$st="HeLlo";
echo "String =" . $st . "<br/>";
$st1="";
echo "string Length =" . strlen($st) . "<br/";
for($i=strlen($st)-1;$i>=0;$i--){
    $st1=$st1.$st[$i];
}
echo "String Reversed =" . $st1 . "<br/>";
echo "String Uppercased =" . strtoupper($st) . "<br/>";
echo "String Lowercased =" . strtolower($st) . "<br/>";
?>
```

Output:-

String =HeLlo
string Length =5
String Uppercased =HELLO
String Lowercased =hello
