

Objectives-

Write a program in PHP to display the table of a number on the browser.

EXPLANATION

Here I used the basic PHP echo and for loop for creating the table. The number I chose was “5”, So the table will be printed for “5”. By using the echo tag I have printed the html tags which basically meant that the browser will generate the following html tag and execute them, same with CSS happened here.

Following are Some Example :-

```
echo "<table><tr><td>Hello!</td></tr></table>"
```

- All the tags mentioned here are executed as HTML tag !!
- I have also used ‘for’ loop for multiplying the number by each number from 1 to 10 and also used \$ for declaring the variables in the PHP files. Example :- Input : Output : \$var-name = 48 54 \$ var-name.6 echo \$var-name

Input Code

```
<?php
    echo "<table border=1>";
    $num=21;
    for($i=1;$i<=10;$i++)
    {
        $result=$num*$i;
        echo"<tr><td>".$num."<td>*<td>".$i."<td>=<td>".$result;
    }
    echo"</table>";
?>
```

Output

21	*	1	=	21
21	*	2	=	42
21	*	3	=	63
21	*	4	=	84
21	*	5	=	105
21	*	6	=	126
21	*	7	=	147
21	*	8	=	168
21	*	9	=	189
21	*	10	=	210
